	<b>High Impact Fuse Units</b>	Rev. Date 11-DEC-07	Rev A 02

**High Impact 82mm and 92mm center BS style fuse units with Integral Generator Connection.  
Type : SPF92/LVC , SPF82/LVC**

The fuse units provide a safe and efficient means of connecting a temporary generator supply to a LV cabinet fuse way or Pole mounted fuse carrier, to allow for easy establishment of an emergency or temporary power supply.

**Key Features include:**

- New High Impact shroud ensures continued performance even after being dropped from heights.
- Handles are moulded with 82mm and 92mm pitches to allow for easy identification.
- Generator connector does not foul the thumb screws during tightening. Due to static design.
- Protective caps to protect generator connector when not in use are available.
- Test point available on front of shroud to allow connection of voltage reading instruments
- All component parts available separately, for spares or repair.
